Model 3100

When you need safe, secure movement of inmates, specify Tymetal's 3100 Pedestrian Sliding Gate System. The 3100 Pedestrian Sliding Gate System operates in a smooth, consistent manner with internal positive locking. Virtually maintenance free, the 3100 Pedestrian Sliding Gate System is ideal for minimizing your operational costs and personnel management.

RELIABLE

The 3100 Pedestrian Sliding Gate System is fully assembled at the factory and shipped to the project site, ready for installation. The required gate/door panel is installed with the system. The assembled system is factory tested before shipment.

SECURE

Providing lasting protection and secure operation, durable 10-gauge galvanized steel fully protects both the drive and locking assemblies against inclement weather and tampering. The 3100 mechanically deadlocks the gate panel in both the open and closed positions.

ACCESSIBLE

If the unit must be operated manually, access covers are provided on both sides to the gate and locked with five or six tumbler paracentric key deadbolt locks.

VERSATILE

The 3100 Pedestrian Sliding Gate System is offered in a 48", 60" or 72" clear opening with an 84" clear height. Card readers, special keying, photo safety eyes and variety of push button controls are available with this system.

ENGINEERED

Tymetal offers complete CAD (Computer-Aided Design) services from the conceptual stages of your project to the final submittal drawings. Additionally, all of our 3100 drawings are available via e-mail.

Tymetal ships the highest quality enclosure systems nationwide to installers from two locations:

In New York
2549 State Route 40
Greenwich, NY 12834

In Texas
4501 Dixie Farm Road
Pearland, TX 77581
