

Fortress Gate Pedestrian Slide

The Fortress Standard Pedestrian Gate, manufactured by the Tymetal Corp., is a cantilever system consisting of single or multiple panels. Appropriate for openings up to 6 feet for single gates and up to 12 feet for doubles, the Fortress Gate is designed to create maximum user flexibility.

The frame is fabricated from aluminum alloy extrusions with primary members (top and bottom) "P" shaped in cross section. Vertical members at the ends of the frame are square in cross section with nominal base dimensions of no less than 2"x2".

The gate frame is supported from the track of extruded aluminum alloy by two self aligning, 4-wheeled, sealed lubricant, ball-bearing truck assemblies. The bottoms of the support posts are equipped with two pairs of rubber guide wheels.
