# Maximum Security Gate Operator for High-Use Passageways

## COMPLETE SYSTEMS

Tymetal offers innovative products that are specifically designed for the correctional industry. New models include features that facility security and maintenance staffs require to maximize security and minimum system maintenance.

## SECURE

PLUSS sallyport locking systems feature a keyless three-point positive locking capability making it impossible to open the gate except by electrical operation or emergency hand-cranking. The hand crank is contained within the secure motor box. A state of the art locking device enables the system to positively lock either a chain link fence panel or a steel door in three secure locations along the leading edge of the gate or steel door.

## RELIABLE

PLUSS vehicle sallyport locking systems are installed throughout the correctional market. These innovative locking devices have earned the reputation of being the most cost advantageous systems in today's correctional market. Our products perform! Tymetal's commitment to service, timely delivery, producing products with low maintenance requirements, and providing outstanding training/technical support services make Tymetal the leader in the industry.

## DURABLE

Inclement weather conditions or inmate tampering are no match for the PLUSS locking systems! PLUSS systems feature an enclosed drive assembly. The entire drive and locking mechanisms are encased in a 10 gauge galvanized steel enclosure. The enclosure protects the locking and drive assemblies that provide positive engagement without the loss of draw force, (force to open and close the gate/steel door). In addition, the 10 gauge galvanized steel enclosure offers superior protection against possible tampering.

## SYSTEM OPTIONS

### PLUSS-10

For maximum security applications and openings up to 30' wide, this system is designed to accommodate steel doors with weights up to 6,000 lbs.

### Bi-Parting PLUSS

Split the middle securely! Bi-parting PLUSS is ideal for confined areas where operational space is limited. The locking column is located in the center of the gate, attached to one of the gate panels

Tymetal ships the highest quality enclosure systems nationwide to installers from two locations:

**In New York**  
2549 State Route 40  
Greenwich, NY 12834

**In Texas**  
4501 Dixie Farm Road  
Pearland, TX 77581

**800-328-GATE (4283)**
